PROJECTS

CRM RESTAURANT BUSINESS

📅 07/2025 - Present   📍 Odence

CRM system for restaurants solves SME challenges. No monthly fees, no third-party software; configured once per venue. Simplifies operations: order tracking, role-based access, menu/recipe management, ensuring full process control

- Automation of routine processes: eliminated the need for manual tracking in Excel or on paper - the system calculates cost, monitors stock levels, and sends alerts automatically
- Tailored for each business: not a generic CRM - fully customizable to match the specific workflows, roles, and kitchen structure of each restaurant
- Cost reduction: replaces paid SaaS tools with a self-hosted solution - saving money on subscriptions and reducing reliance on third-party platforms
- Easy onboarding for staff: intuitive UX/UI allows employees to learn the system in 1–2 days, minimizing training time
- Business transparency and control: owners get real-time visibility into costs, inventory, and profitability - enabling faster and smarter decisions
- Live page and Git front & Git Back

Cryptocurrency exchanger

📅 12/2024 - 12/2024   📍 Kyiv, Ukraine

Crypto exchange UI - responsive single-page application for real-time cryptocurrency conversion. Integrated external API for live rates, implemented dynamic validation, intuitive form behavior, and optimized performance using modular frontend architecture. Built entirely without backend, focused on usability and fast interaction

- Designed and implemented a responsive cryptocurrency exchange interface, enabling real-time currency conversions with seamless user experience
- Integrated external API to provide accurate live rates and instant feedback, improving user trust and interaction speed
- Delivered a clean, performant UI using React, CSS Modules, and Styled Components, ensuring a consistent experience across devices
- Enhanced usability with dynamic input validation, intuitive form behavior, and clear exchange flows
- Optimized performance with Vite and a modular code structure, reducing build times and improving maintainability
- Successfully demonstrated end-to-end product logic without backend control, focusing on frontend architecture and usability
- Live page and Git documentation

Drinkify Web application

📅 11/2023 - 11/2023   📍 Kyiv, Ukraine

Short summary of your work

- Developed an interactive landing page for a digital product using HTML, SCSS, JavaScript and Parcel.
- Implemented responsive design with smooth scroll, fixed navigation, and animated sections for enhanced user experience.
- Built modular, maintainable SCSS architecture for scalable styling.
- Integrated modal windows, contact forms, and scroll-based animations for dynamic user engagement.
- Live page and Git documentation

SUMMARY

Junior Full Stack Developer with a solid understanding of JavaScript and full-cycle product development. Skilled in both frontend (React, Redux Toolkit, Material UI) and backend (Node.js, Express, Telegram API), with a strong focus on clean architecture, usability, and long-term maintainability. Not just writing code, but thoughtfully building functional systems from the ground up. Highly motivated to grow within a stable, long-term team environment. Persistent, detail-oriented, and comfortable with repetitive or meticulous tasks - always aiming for quality and consistency in development

KEY ACHIEVEMENTS

💎 **Enhanced Client Satisfaction**
Increased client satisfaction by 30% via custom software solutions.

💎 **Successful Project Launches**
Developed and launched 5 fully functional web projects in a year.

💎 **Optimized Website Performance**
Reduced website load time by 50% with optimized code.

💎 **Teamwork In Development**
I work well both in a team and alone.

TRAINING / COURSES

Certificate of Completion
GoIT Academy
